

Assignment 2: Build the “Firefox New Tab / News Cards” UI

Recreate the Firefox New Tab screen (as shown in the provided screenshot) using React (Vite), Tailwind CSS, and shadcn/ui.

The goal is to produce a clean, responsive, accessible, and modular UI, built to professional front-end standards.

Tech Stack

- **React (Vite + TypeScript)**
- **Tailwind CSS**
- **shadcn/ui** (for ready-to-use components)

Requirements

- Focus on:
 - Component design and reusability
 - Responsive layout (desktop → tablet → mobile)
 - Accessibility (keyboard focus, alt text)
 - Clean and consistent code organization
- Use **Tailwind CSS** for utility-based layout and styling.
- Use **shadcn/ui** for shared UI elements:
 - Button, Input, Card, Tooltip, etc.
 - You may extend or customize the Card component for story cards.
- Maintain **clear Git commits** with meaningful messages.
- Include a **README.md** file with:
 - Project overview
 - Setup and run instructions
 - Folder structure
 - Screenshots
- App must build and run with: yarn dev

Deliverables

1. A working project, GitHub link.
2. Clean, modular codebase following best practices.

- 3. README with setup, usage, and documentation.
- 4. Proper Git commit history (no single “final commit”).

Project Setup

- Initialize **Vite + React + TypeScript** project.
- Configure **Tailwind CSS** and verify base styles.
- Install and configure **shadcn/ui**.
- Add `.prettierrc` and `.editorconfig` for consistent formatting.

GitHub Repository Setup

Repository Name: `firefox-newtab-react`

Branch Strategy:

Branch	Purpose
main	Stable, production-ready code
dev	Development branch for active work
feature/setup-project	Vite + Tailwind + shadcn setup
feature/header-design	Header and shortcut row
feature/news-grid	Story grid and cards
feature/api-integration	Data loading and interactivity

Git Commit Style Guide (Best Practices)

Follow the **Conventional Commits** format:

<type>(scope): short description

Type	Description	Example
feat:	Introduces a new feature	feat(story-card): add overlay with title and source
fix:	Fixes a bug	fix(header): correct logo alignment on mobile
style:	Changes that affect styles only	style(story-grid): adjust gap between cards
refactor:	Code refactoring (no new feature or fix)	refactor(card): extract overlay into a subcomponent
chore:	Build/config updates	chore(tailwind): update base configuration
docs:	Documentation changes	docs(readme): add contribution guidelines
test:	Add or update tests	test(card): ensure alt text presence

Documentation:

Add a README.md with:

- Project overview
- Setup & run instructions
- Folder structure
